

Farm Service Agency

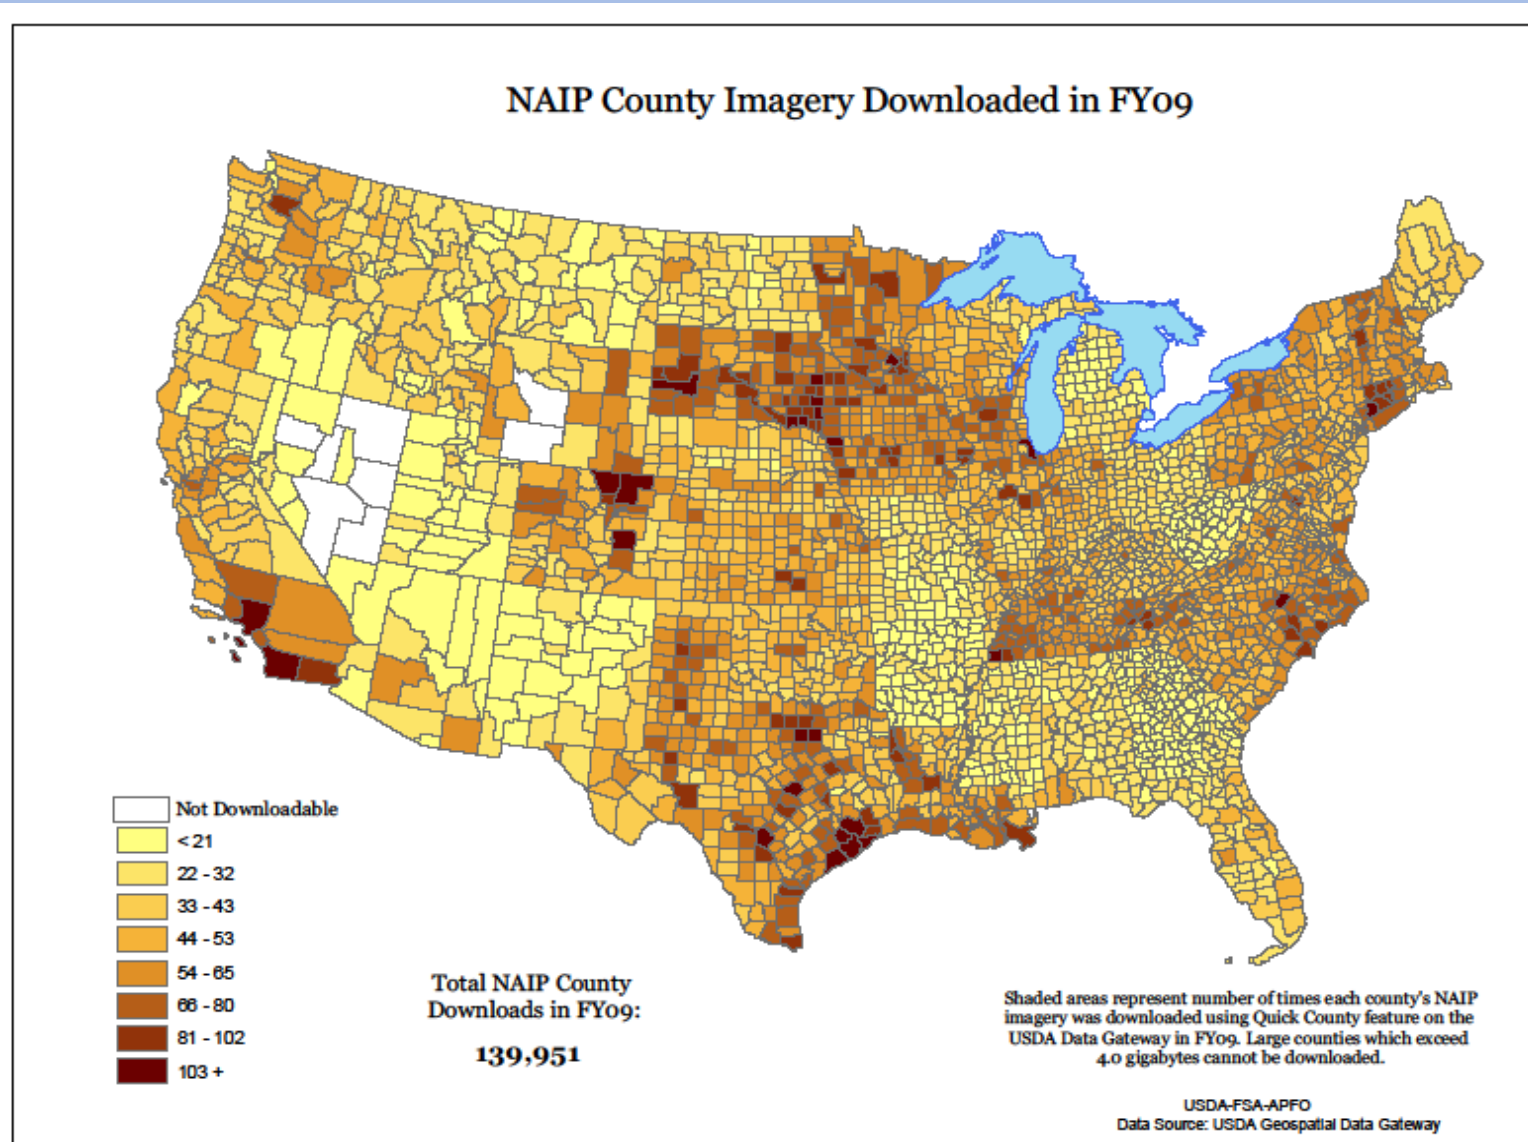

**Distribution of
NAIP
Imagery to End Users**

National Agriculture Imagery Program

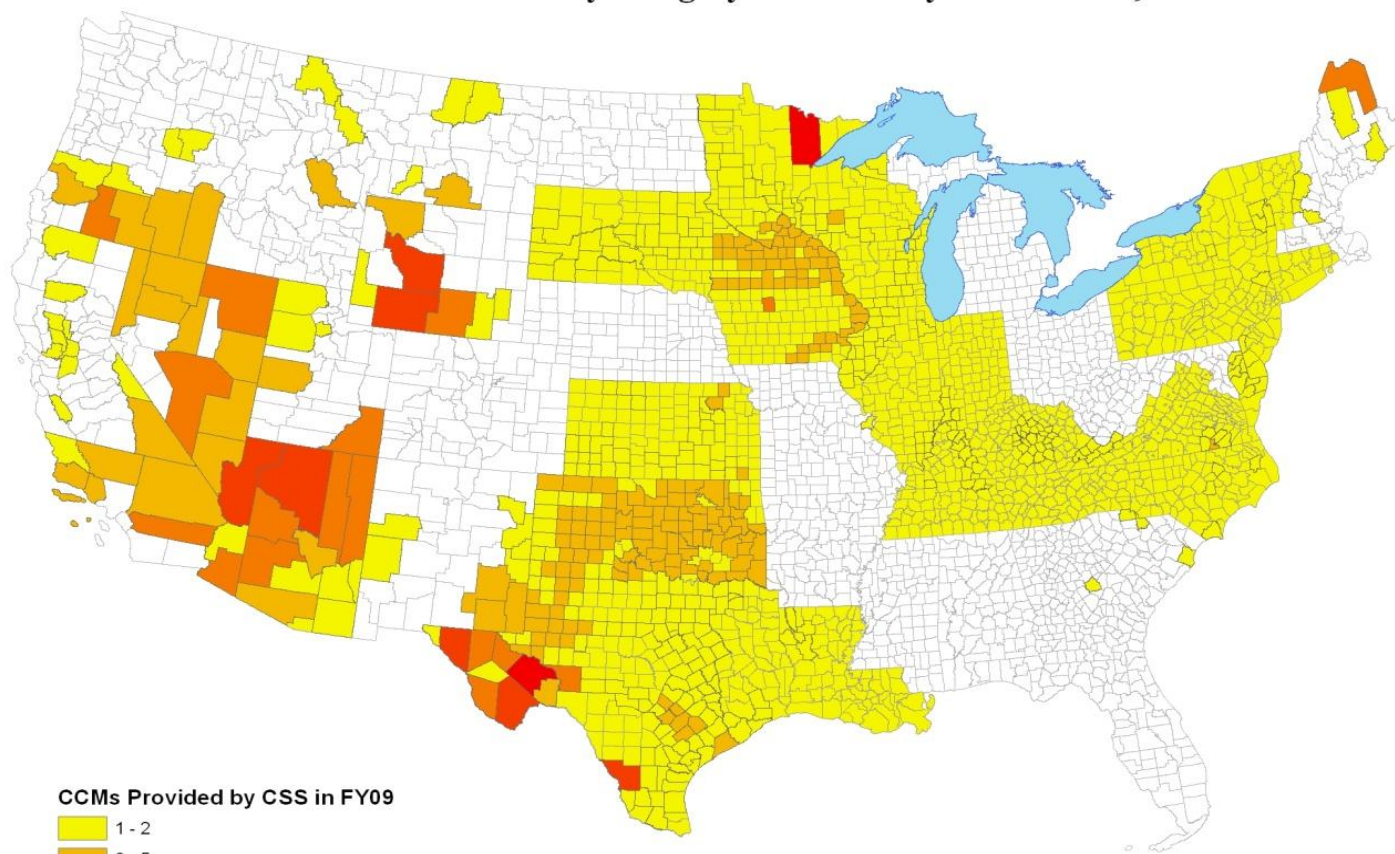

Collection of information from states and other government agencies about NAIP imagery distribution can be used for FSA identification of usage trends and value to the public.

NAIP county mosaics downloaded from the USDA Geospatial Data Gateway illustrates volume of specific counties and states for Fiscal Year 2009.

Sources of NAIP Distribution: Geospatial Data Gateway, APFO , NSGIC, and ESRI

NAIP County Imagery Provided by CSS in FY09

CCMs Provided by CSS in FY09

Total NAIP County Mosaics
Provided by CSS in FY09:

1,619

Shaded areas represent number of times
each county's NAIP imagery was provided
by APFO Customer Service Section in FY09.

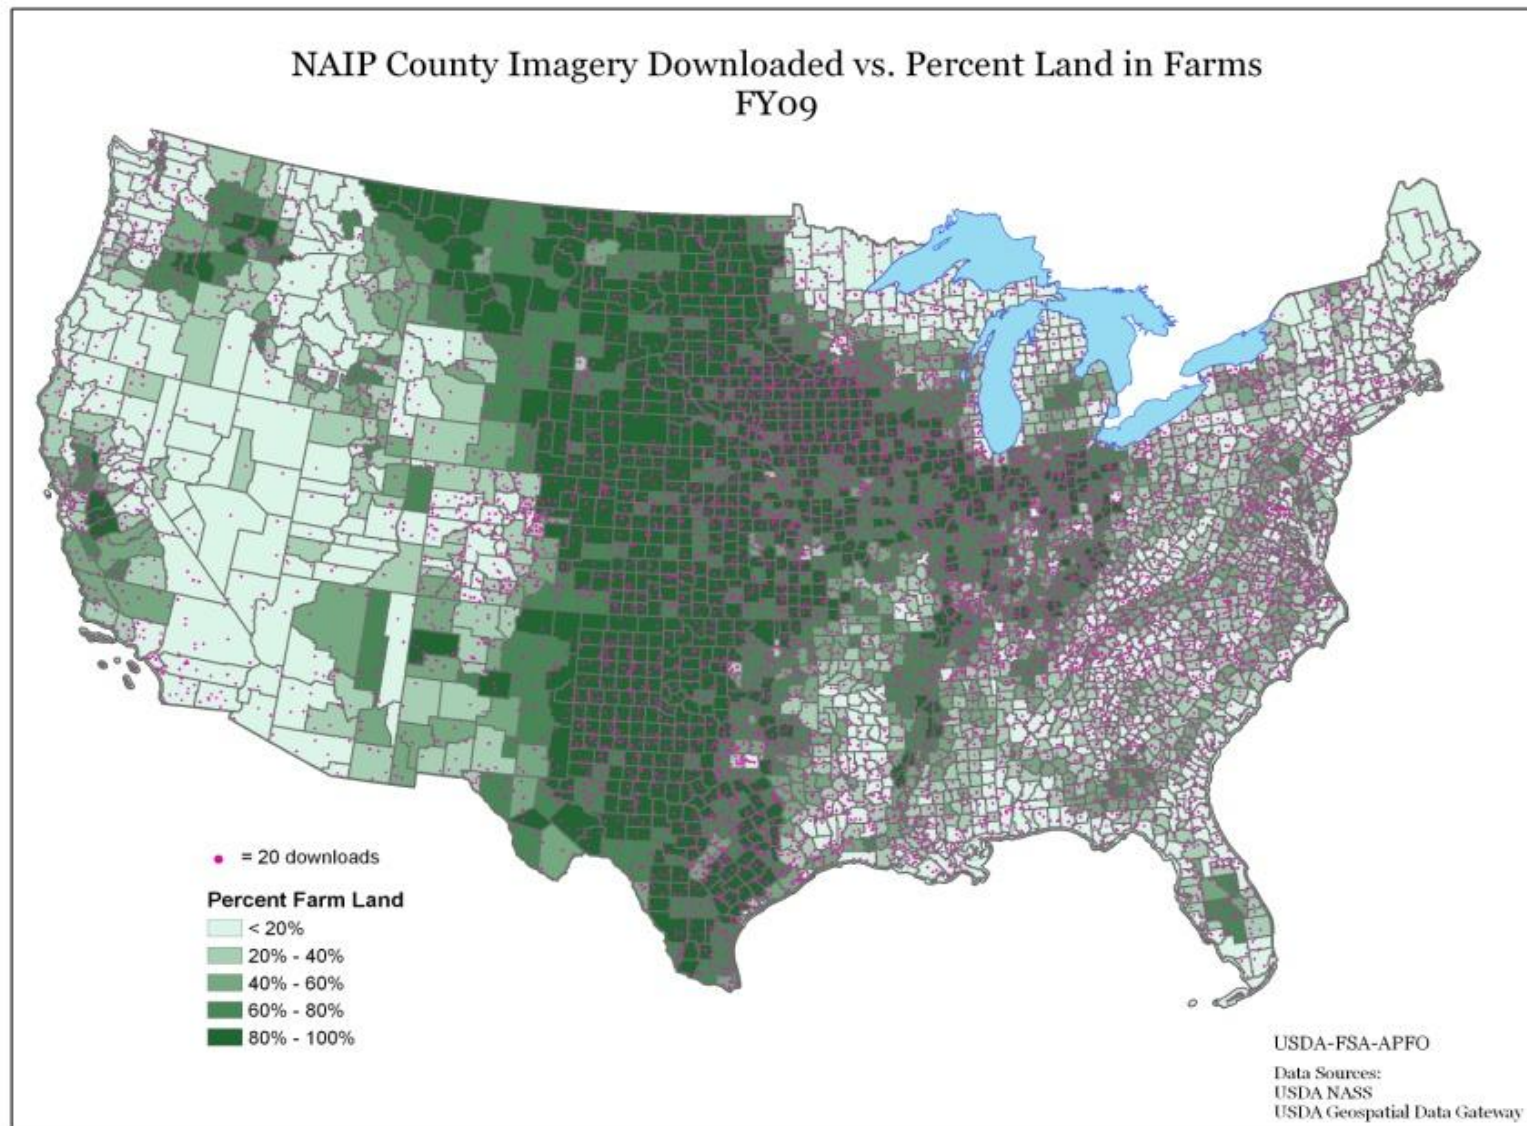

USDA-FSA-APFO

NAIP county
mosaic media
orders from
APFO Fiscal
Year 2009.

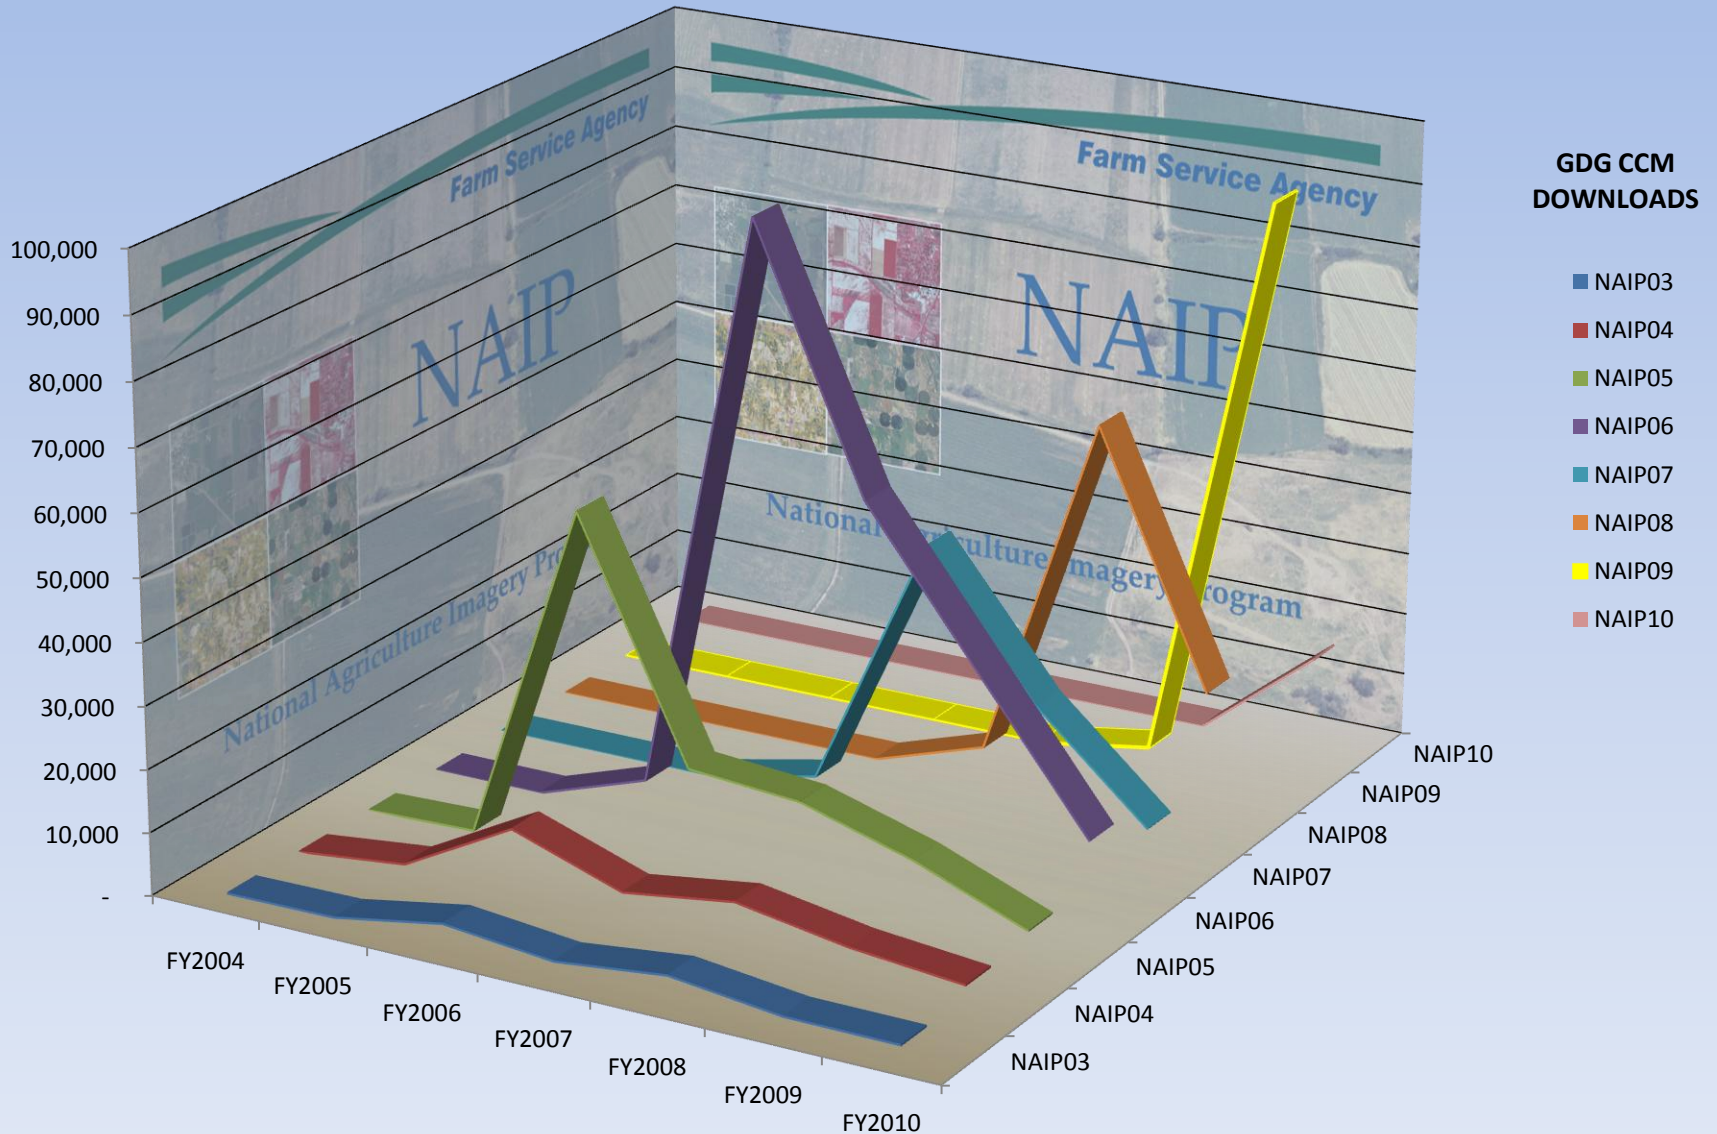

Higher
volume for
counties not
available on
the GDG due
to limited
download file
size.

The data can be used in various ways to illustrate NAIP distribution ...

NAIP county
mosaic
downloads
compared to
percent farm
land.

Using historical information such as county mosaic downloads by NAIP year can be presented in different graph formats such as ...

GDG NAIP CCM Downloads

Information collected from state and other federal agencies not only will include imagery distribution but also any data from web mapping services such as gross number of page hits.

State	Product Available	Gross Page Hits	# of CCMs	# of QQ	Total Downloads	Months
AR	CCM		221			1
AZ	CCM; DOQQ (Chargable)		7	28		12

Standards for submitting NAIP distribution statistics to APFO

For Downloadable Products:

- Product format
- Geographic coverage available on website
- Quantity of downloads for each product format available
- Quantity of each geographic area product downloaded
- Time period of distribution (fiscal year)
- Quantity of unique IP addresses downloading imagery

For Web Map Services (WMS):

- Gross hits to WMS
- Quantity of unique IP addresses connecting to WMS
- Time period over which gross hits were collected

Information Requested

- Intended to impose a minimal burden on collecting agencies.
- Does not contain personally identifiable information (such as individual IP addresses).
- Useful both as stand-alone information and as the product of statistical analysis. For a WMS example, an analysis of the quantity of gross hits and the quantity of IP addresses would tell us whether many/few individuals are downloading small/large amounts of NAIP data.
- **Refer to FY09 report: Quantifying the Distribution of NAIP Imagery to End Users**
